                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               12 TCATTAATGAAG 1
                                                                                                                                                             Two wild yellow baboons from Tanzania were identified in a previous study with strong SIV(agm) seroreactivity. They lived in a national park where yellow baboons and African green monkeys share the same habitat. In this study, molecular characterization was performed for virus derived from one of the SIVagm seroreactive yellow baboons (animal 2010) and from two vervet African green monkeys (animals ver266 and ver385). With this aim in mind, uncultured leukocyte DNA was PCR-amplified, cloned and sequenced over a 672 bp region of gag and a 906 bp region of env for animal 2010 (only the env region was analyzed for isolates ver266 and ver385). Jin et al. note that the viral strain derived from the yellow baboon (animal 2010) clusters with SIV strains of the vervet subtype, including ver266 and ver385, and believe that this is the first evidence for simian-to-simian cross-species
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Desrosiers,R.C., Shaw,G.M., Sharp,P.M. and Hahn,B.H. Infection of a yellow baboon with SIV from African gree evidence for cross-species transmission in the wild J. Virol. (In press, 1994) full staff_review

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            3 TCATTAATGAA 13
                                                                                                                                                                                                                                                                                                                                                          recombinant clones were manufacture. The recombinant clones were manufacture. The recombinant clones were manufacture. The recombinant clones were mastered to a heterosexual 48-year old teacher from Guinea Patient 7924 was living in the Washington, D.C. area. Originally he lived in an urban area in West Africa before traveling extensively and coming to the United States. After seeking medical care for a STD, patient 7924 was identified as HIV-2 positive. Subsequent Western blot analysis of peripheral blood cells showed HIV dual reactivity. Virus isolation was successfully performed at the reactivity. The hamma at Birmingham. Sample 7924A clusters with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         to now, HIV-2 sequences have been derived almost solely from cultured isolates. Since cultivation may select against viruses which can not grow in a particular cell type, Gao et al. argue that a greater variation may be elucidated by sequencing virus obtained from uncultured PBMCs. With this aim in mind, peripheral blood samples were collected from 12 HIV-2 seropositive patients (2238, 60415K, 60667K, 7312A, 7810A, 7924A, FA, FO784, FT, JA, ON, and PA) from six different West African countries, living in both urban and rural areas. Uncultured PBMC DNA was PCR amplified, and the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence was obtained as part of a study designed to determine the in vivo extent of HIV-2 genetic and biological variation.                                                                                                                                                                                                                                                                                                                 SIVAGMIYO appears to lack a vpR coding region. [1] suggests that this may account for SIVAGMIYO'S lack of pathogenicity. Proceeds contains an in-frame stop codon at positions 8077-8079, similar to the in-frame stop codons found in the SIV macaque and HIV-2 ROD35 envelope coding regions, except that SIVAGMIYO'S stop codon is found 96bp downstream from the 3' splice junction of tat and rev, which is the location of the stop codon in the other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SIVAGMTYO 9170 bp ss-rNA VRL 01-MAR-1989 Simian (African green monkey) immunodeficiency virus, isolate TYO-1, complete genome.
                                                                                                                                                                              [1] finds that SIVAGMTYO is approximately equally distantly related to the HIV-1's and the HIV-2/SIV (macaque) group; over a "conserved" stretch of the pol protein, TYO is only 87% similar to AGM385 and 82% similar to AGM266, the latter two differing by 20%.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This sequence was obtained from a lambda clone derived African green monkey imported from Kenya.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           chromosomal closed-circular DNA, TYO-1 clone 1 (bases 1 to 9170) Fukasawa, M., Miura, T., Hasegawa, A., Morikawa, Miki, K., Kitamura, T. and Hayami, M.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Similan (African green monkey) immunodeficiency virus, extra-
chromosomal closed-circular DNA, TYO-1 clone lambda-SAH12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 X07805

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Kindly submitted prior to publication and in a computer readable form by Phillip Johnson, NIAID/Georgetown University. The typical stop codon "tag" in rev (position 8574) is "cag" making rev in SIVgri-1 (lambdaII) longer than rev in most other sequences. The gri-1 sequence is the most divergent primate lentivirus reported to date.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Johnson, P.R., Fomsgaard, A., Allan, J., Gravell, M., Olmstead, R.A. and Hirsch, V.M.
Simian immunodeficiency viruses from African green
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A highly divergent proviral DNA clone of SIV from a distinct species of African green monkey. Patient 60415K was a heterosexual 34 year old asymptomatic man from urban Senegal, who was living in the Washington, D.C. area. He traveled extensively before coming to the United States where he was identified as HIV-2 positive after seeking medical care for a STD. He was married to an American IV drug user. Virus isolation was successfully performed at the University of Alabama at Birmingham. Virus 60415K clusters with the subtype A HIV-2 viruses.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          VRL 23-AUG-1994

Uncultured PBMC DNA was PCR amplified, and the recombinant clones were manually sequenced. Another portion of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cultured isolates. Since cultivation may select against viruses which can not grow in a particular cell type, Gao et al. argue that a greater variation may be elucidated by sequencing virus obtained from uncultured PBMCs. With this aim in mind, peripheral blood samples were collected from 12 HIV-2 seropositive patients (2238, 60415K, 60667K, 7312A, 7810A, 7924A, FA, FO784, FT, JA, ON, and PA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          full staff_review
This sequence was obtained as part of a study designed to determine the in vivo extent of HIV-2 genetic and biological variation. Up to now, HIV-2 sequences have been derived almost solely from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Genetic diversity of human immunodeficier for five distinct sequence subtypes with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human immunodeficiency virus type 2 Viridae; ss-RNA enveloped viruses;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        biology

                                            Simian immunodeficiency virus proviral DNA, isolate TAN-9 from Ugandan tantalus monkey (Cecopithecus tantalus). Simian immunodeficiency virus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence was obtained as part of a study designed to determine the breadth of genetic variation of SIV infecting African green monkeys. With this aim in mind, Jin et al. PCR-amplified, cloned and sequenced the LTR and partial envelope region from 12 isolates (ver-1, ver-2, gri-2, gri-3, sab-1, sab-2, sab-3, sab-4, tan-1, tan-10, and tan-49). These isolates were derived from different African green monkey species inhabiting various geographical regions. Most of the vervet and grivet viruses and all of the sabaeus and tantalus viruses were derived from feral

Description

Pred. No

Statistics:

Mean 4.607;

Variance 2.283; scale 2.018

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                This sequence encodes a Staphylococcus aureus protein of unknown function, and represents a DNA Sequence of the invention.

The DNA sequences were isolated from Staphylococcus aureus WCHU29 (NCIMB 40771). Host cells containing the DNA sequences are used to produce polypeptides or fragments. The proteins are used in the treatment of disease, for inducing an immune response by administering them, to produce antibody and/or T-cell immune response. Antagonists of the proteins are used for the inhibition of bacterial polypeptides. Conditions which may be treated include bacterial infections, especially respiratory, cardiac, gastrointestinal, central nervous, eye, kidney, respiratory, cardiac, gastrointestinal, central nervous, eye, kidney,
                                                                                                                                           respiratory, cardiac, gastrointestinal, central nervous, eye, kidney, urinary tract, skin, bones and joints. The proteins can also be used to identify antimicrobial compounds which are broad spectrum antibiotics, especially useful in the treatment of H. pylori infection. Sequence 619 BP; 208 A; 117 C; 79 G; 215 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DNA encoding a Staphylococcus aureus protein of unknown function.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PS Claim 2; Pages 4-5; 39pp; English.

CC The invention relates to a UDP-N-acetylmuramate:L-alanine ligase (MurC polypeptide) encoded by the S. aureus MurC gene. Host cells containing an expression system comprising the MurC gene can be used for the recombinant production of the polypeptide. Appoints or the MurC polypeptide are used to treat conditions requiring increased activity or expression of the polypeptide. Antagonists, inhibitory nucleic acid or competitive polypeptide are useful for inhibiting the polypeptide e.g. competitive polypeptide are useful for inhibitory nucleic acid or competitive polypeptide are useful for inhibitory nucleic acid or competitive polypeptide are useful for inhibitory nucleic acid or competitive polypeptide are useful for they are also useful against Helicobacter pylori infections and related cancers, ulcers and gastritis. The antibacterial agents are useful to treat in dwelling devices for infection prevention or generally as wound treatments to prevent adhesion of bacteria to matrix proteins. The MurC polypeptide is also useful for diagnosing or prognosing a (susceptibility to) disease, for raising antibacterial muncles of determine haterial services are useful in antisense/ribozyme therapeutics; to detect mutant MurC gene; for corporation of actoring to determine haterial services.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1198 gcatcgttcattaatgaag
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   aureus UDP-N-acetylmuramate:L-alanine ligase (Murc polypeptide). Host cell containing an expression system comprising the Murc gene can be used for the recombinant production of the polypeptide. Agonists or the Murc polypeptide are used to treat conditions requiring increased activity or expression of the polypeptide. Antagonists, inhibiting nucleic acid or competitive polypeptide are useful for inhibiting the polypeptide e.g. bacterial (especially S. aureus) infections. They are also useful against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            (SMIK ) SMITHKLINE BEECHAM CORP.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DNA encoding a Staphylococcus aureus protein of unknown function. Staphylococcus aureus protein; ribozyme; antisense sequence; control; Staphylococcal gene; regulatory element; bacterial gene expression; vaccine; Staphylococcal infection; food poisoning; scaled skin syndrome;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Helicobacter pylori infections and related cancers, ulcers and gastritis. The antibacterial agents are useful to treat in-dwelling devices for infection prevention or generally as wound treatments to prevent adhesion of bacteria to matrix proteins. The MurC polypeptide is also useful for diagnosing or prognosing a (susceptibility to) disease, for raising antibodies; to identify modulators or specific receptors; in rational
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence represents a MurC gene encoding a Staphylococcus aureus UDP-N-acetylmuramate:L-alanine ligase (MurC polypeptide). Host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             WO9730070-A1.

sequence can be used in the construction of ribozymes and antisense sequences to control the expression of Staphylococcal genes. The DNA sequence is also useful as a source control of bacterial gene expression. The encoded protein may be used to produce vaccines to enable a host to produce specific antibodies with antibacterial action. These vaccines and antibodies would protect

protect

The present sequence encodes a Staphylococcus aureus protein of unknown function. The present sequence was isolated from a library of clones of S. aureus WCUH 29 in Escherichia coli. The DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        of endogenous protease Disclosure; Fig 2A; 39pp; English. Disclosure; Fig 2A; 39pp; English. The EDS is pref. carried on a multicopy plasmid and/or is intergrated into the chromosome of the bacterial cell which is most pref. of a B. subtilis strain. The cells provide enhanced expression of desired genes in bacteria such as B. subtilis which does not require modifications in the fermentation conditions of the strain co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                WPI; 87-179522/26.
Enhancing expression of genes in bacterial transformation with enhancing DNA sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sloma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               27-OCT-1986; 308356.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PT Pincapple, papaya and mango ACC synthase genes - used in gene produce fruits with reduced senescence Claim 5; Fig 5; 46pp; English.

CC This sequence represents the novel gene, miacc2, which is a member cof the mango ACC synthase multigene family. ACC synthase an enzyme CC involved in the pathway for ethylene biosynthesis and the rate of CC endogenous expression of ACC synthase is considered to limit CC endogenous expression of ACC synthase is considered to limit CC often deleterious to crops, especially if some form of mechanical CC wounding has occurred and diminishes their post harvest quality and CC storage life. Novel ACC synthase genes expressed in transgenic plants CC using either sense or antisense expression system may be used to control the regulation of plant development, in particular fruit ripening, CC reducing senescence and thus improving storage life.

Alterations were made to the TATA box sequence of the human and mouse GM-CSF genes (see Q55627 and Q55628, respectively) and the effects of the various alterations on gene expression were measured. Results indicated that resonances of the LFF type are most strongly affected by changes in the TATA box; it was further shown that

DNA base sequence - with improved protein-secretory power.

Claim I; Page 425-426; 8pp; Japanese.

The sequence enhances associated protein expression, and may act as a useful marker for recombinant plasmid expression.

Sequence 1707 BP; 505 A; 342 C; 398 G; 462 T;

A murine GM-CSF which is similar to the human GM-CSF is used for generating a recombinant poxvirus. The recombinant poxvirus comprises a nucleic acid sequence encoding a biological response modifier or its immunomodulating fragment in a non-essential region of the recombinant virus genome. The biological response modifier may be a cytokine, e.g. interlekin-12 (IL-12), IL-2 or GM-CSF. The recombinant poxvirus is used to transfect cells for expression of the biological response modifier. The products are useful for the treatment of tumours or for protecting a host against tumour formation.

PS Claim 1; Page 1092-1094; 3271pp; English.

CC of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access comemory (RAM), read-only memory (ROM) or CD-ROM. Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so condition the sequences allows putative functions to be assigned so condition the condition of regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are clikely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The cc polypeptides can also be used in a kit for the immunodetection of cc including cellulitis, eyelid infections, food poisoning, osteomyelitis, cc including cellulitis, eyelid infections, food poisoning, osteomyelitis, cc skin and surgical wound infections, scalded skin syndrome, toxic shock csyndrome, etc. Organisms transformed with the DNA sequences can be used cf or recombinant production of the polypeptides. The new DNA sequences can be used computer readable medium.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        В
                                                                                                                                                                haemochromatosis (HFE) gene mutation in an individual comprising:

(a) providing DNA or RNA from the individual; and (b) assessing the DNA or RNA for the presence or absence of a haplotype or genotype where the presence or absence of the haplotype genotype indicates the likely presence of the HFE gene mutation in the genome of the individual. The HFE gene sequences from the present invention can be used to develop products for use in the diagnosis and treatment of HFE. The present invention also describes BTF genes, which are homologues of the milk protein butyrophilm (BT), and can be used in the production of agonists and antagonists of BT function. Also described are: (1) a ROREt gene which can be used to develop products for the study, diagnosis and treatment of lupus and Sjogren's syndrome; and (2) NPT3 and NPT4 genes which are homologues of a type 1 sodium transport gene, and can similarly be used for hypophosphatemia.

The present invention describes hereditary haemochromatosis gene products from the human haemochromatosis gene. The present sequence represents a hereditary haemochromatosis subregion from an individual unaffected by hereditary haemochromatosis (HH). Also described is a method to determine the presence or absence of the common hereditary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            of Enterococcus faecalis in samples. They can also be used for diagnosing Enterococcal infection in an animal and monitoring progression of disease, and for identifying agents which can be used to modulate the growth or pathogenicity of Enterococcus faecalis, or another related organism, in vivo or in vitro. In particular the polypeptides encoded by the Enterococcus faecalis nucleotide sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Hereditary haemochromatosis subregion from an unaffected individual. PS Claim 1; Fig 9; 209pp; English.

PS Claim 1; Fig 9; 209pp; English.

CThe present invention describes hereditary haemochromatosis gene. The present sequence products from the human haemochromatosis subregion from an hereditary comethod to determine the presence or absence of the common hereditary haemochromatosis (HFB) gene mutation in an individual comprising:

CC method to determine the presence or absence of a haplotype encrype where come the presence or absence of a haplotype genotype where come products for use in the present invention can be used to develop products for use in the diagnosis and treatment of HFE. The present comproducts for use in the diagnosis and treatment of HFE. The present comproducts for use in the diagnosis which are homologues of the milk comproducts of a grady products of the sed to develop products for the sed to develop products for the study, diagnosis and creatment of HPE. The present comproducts of the milk comproducts of the sed to develop products for the study, diagnosis and creatment of lupus and Sjogren's syndrome; and (2) NPT3 and NPT4 genes which are homologues of a type 1 sodium transport gene, and can comproduct sequence 237326 BP; 69596 A; 48904 C; 48217 G; 70609 T;

/note="vector: pBluescript SK; Site_1: SalI; Site_2: NotI;
Cambial region tissues, including developing xylem, the
meristematic cambial zone and the developing and mature
phloem, was harvested from 1.5 m actively growing trees.
cDNA was prepared and cloned into lambda gt22a. DNA was
isolated and subcloned into pBluescript SK using SalI and
NotI restriction enzymes."
